Our Comprehensive services include:

- Treatment for wounds resulting from poor circulation, chronic venous insufficiency, diabetes with neuropathy, pressure due to immobility
- Diet education and meal planning
- Blood sugar monitoring, insulin administration and management
- Pain Assessment
- Resource Education

About Your Condition

Diabetic Nerve Pain

Diabetic Nerve Pain is caused by damage to your nerves. It is also known as Diabetic Peripheral Neuropathy, or DPN. DPN is often found in people with diabetes who have high blood sugar levels over time. Your doctor may be able to help you get better control of your blood sugar level. This may help prevent more nerve damage.

What Does Diabetic Nerve Pain Feel Like?

If you have nerve pain, it may be hard to do simple things like dressing, walking, or even just lying down.

Some people with DPN may have symptoms that include:

- Tingling in the toes and ankles
- Burning in the feet that gets worse at night
- Pain when wearing shoes or standing

Could You Have Diabetic Nerve Pain? Check Out Your Pain

Complete the [Pain Assessment Checklist](#) on the back cover of this brochure. Take the results to your doctor. The Checklist can help you discuss with your doctor whether the pain could be Diabetic Nerve Pain.
